

ABSTRACT

A method of enabling submission of form data to an application via a printed form, the printed form having coded data readable by a sensing device as the sensing device is used to interact with the form, the method including the steps, performed in a computer system, of: receiving, from the
5 sensing device: interaction data representing interaction of the sensing device with the coded data, the interaction data enabling the form data to be electronically captured in the computer system; and a sensing device ID of the sensing device; allocating a temporary registration to the sensing device ID or to a user associated with the sensing device, the registration including a return telecommunication address associated with the sensing device ID or the user; transmitting the form
10 data to the application.
